

Mitigation Plan

Risks	Design & development of agent	Agent integration into processes
Adversarial attacks	Validate inputs and restrict prompt behavior to safe, structured outputs	Monitor unusual inputs and limit responses to safe, student-focused guidance
Bias and discrimination	Use neutral prompts and avoid assumptions about users	Review outputs regularly to ensure fairness and consistency
Misinformation and hallucinations	Use structured JSON outputs and strict prompt rules	Use Critic agent to review and correct unrealistic or incorrect plans
Data privacy violations	Store minimal data and secure aPI keys with environment variables	Limit data usage and clearly define how user data is handled
Intellectual property risks	Avoid storing or reproducing user content beyond planning needs	Treat inputs as private and generate only summaries and recommendations
