

Product description: Describe the product you're looking for {"Analyze Product Alternatives"}

Product image: Upload an image of the product (optional) {"Analyze Product Alternatives"}

Find Product Alternatives:

Objective:

Use the provided product description and product image to perform a search for duplicate products and suitable alternatives. Use the generate text tool with search grounding to find real-time product information. Analyze the findings to verify match accuracy and provide detailed explanations for why the identified items are appropriate alternatives.

Output Format:

Provide a detailed textual analysis of the results structured for HTML rendering. Call `system_objective_fulfilled` once the analysis is complete.

User Input / Context:

Product Description: {"type": "in", "path": "ask_user_product_description", "title": "Product Description"}

Product Image: {"type": "in", "path": "ask_user_product_image", "title": "Product Image"}

Analyze Product Alternative: Identify the product's key attributes, such as category, brand, intended use, and distinguishing features. It then performs a search-grounded analysis to gather real-time information about similar products available online. The Analyzer Agent outputs a structured dataset containing candidate dupes and alternatives.

User Input / Context:

Product Description: {"type": "in", "path": "ask_user_product_description", "title": "Product Description"}

Product Image: {"type": "in", "path": "ask_user_product_image", "title": "Product Image"}

Generate Duplicates Analysis Webpage: The webpage should be structured to clearly present the original product information alongside the detailed analysis of duplicates and alternatives.

****Layout Organization:****

The page will adopt a clean, section-based layout, prioritizing readability and clear hierarchy.

1. ****Header****: A prominent, centered header at the top of the page, titled "Product Duplicates & Alternatives Analysis," setting the context.

2. ****Main Content Area****: This will be a flexible container that adapts to screen size.

- * ****Original Product Section****: A dedicated, visually distinct section at the top, immediately below the header.

- * It should include a sub-heading like "Original Product Details."
 - * If a `product\_image` is provided, it should be displayed prominently, possibly alongside or above the `product\_description`.
 - * The `product\_description` should be displayed clearly below or next to the image.
 - * **Analysis Results Section**: This will be the primary content area, following the original product details.
 - * It should feature a sub-heading like "Analysis of Duplicates & Alternatives."
 - * The `product\_analysis\_html\_content` (which is already pre-formatted HTML) should be rendered directly within this section, respecting its internal structure (headings, paragraphs, lists, etc.). This section should be designed to accommodate extensive textual content with good readability.
3. **Responsive Design**: The layout should be fully responsive. On smaller screens, sections should stack vertically, and images should scale fluidly. On larger screens, a single-column layout with generous padding is appropriate, or potentially a two-column layout for the original product details (image on one side, description on the other) if it enhances presentation without clutter.

Style Design Language:

The visual design approach is **modern and professional**, aiming for an **informative and trustworthy aesthetic goal**.

- * **Color Scheme**: A palette of cool blues and grays for a clean, professional foundation. A subtle accent color (e.g., a muted teal or soft orange) can be used for headings, highlights, or links to provide visual interest without being overly distracting. Backgrounds should be light (off-white or light gray).

- * **Typography Style**:

- * **Headings (H1, H2, H3)**: A clean, modern sans-serif font (e.g., Lato, Open Sans, Montserrat) for strong visual impact and readability, with varying weights to denote hierarchy.

- * **Body Text**: A highly readable sans-serif font (e.g., Roboto, Noto Sans, Source Sans Pro) for the `product\_description` and the main analysis content, ensuring good line height (1.6-1.8) and paragraph spacing for comfortable reading.

- * **Spacing and Layout Principles**: Generous whitespace will be used throughout the page to create a sense of calm and clarity, making complex information digestible. Consistent padding within sections and margins between sections will establish a clear visual rhythm. Content blocks should feel airy and uncrowded.

Component Guidelines:

- * **Original Product Display**: The original product image (if provided) should be an adaptive image, scaling within its container. The product description text should be presented as a clear paragraph.

* ****Analysis Content****: The `product\_analysis\_html\_content` should be embedded directly. Ensure that its internal HTML elements (like `

`, ``, ` `, ` `, ` `, ` - `) are styled to align with the chosen typography and color scheme, maintaining consistency across the page. This section should support a natural reading flow for detailed textual analysis.
